Fawaz Sobowale a.k.a. Korex

AI/ML Engineer

fawazsobowale.dev@gmail.com | github.com/FawazDev-cmd | portfolio.korexdev.workers.dev

PROFESSIONAL PROFILE

AI/ML Engineer with a strong foundation in machine learning, statistical analysis, deep learning, natural language processing, and computer vision, combined with hands-on experience building applied AI and backend systems. Experienced in developing retrieval, automation, event-processing, and LLM-based applications using Python, FastAPI, PostgreSQL, Docker, LangChain, LangGraph, and modern machine learning tooling. Comfortable working across the full development process, including data preparation, model selection, evaluation, APIs, persistence, testing, CI, observability, and deployment. Previous experience in client success, sales, marketing, partnerships, and team leadership within AI-focused startups adds practical understanding of users, product value, and business outcomes.

CORE TECHNICAL COMPETENCIES

Machine Learning: Python, NumPy, pandas, scikit-learn, XGBoost, data preprocessing, feature engineering, classification, regression, clustering, model selection, cross-validation, hyperparameter tuning, model evaluation, time-series analysis
Deep Learning and Computer Vision: PyTorch, TensorFlow, neural networks, OpenCV, computer vision
NLP and Applied AI: Natural language processing, transformers, Hugging Face, LLM applications, Retrieval-Augmented Generation (RAG), embeddings, retrieval pipelines, reranking, LangChain, LangGraph, structured AI workflows
Statistics and Data: SQL, statistical inference, hypothesis testing, exploratory data analysis, PostgreSQL, MongoDB, Redis
Backend and Engineering: FastAPI, Node.js, REST APIs, Docker, Git, GitHub Actions, pytest, Ruff, mypy, CI/CD, structured logging, observability

SELECTED ENGINEERING PROJECTS

LoreForge | Document Intelligence and Retrieval-Augmented Generation System

Technologies: Python | FastAPI | PostgreSQL | RAG | Docker | **GitHub** | **Demo**

- Built a document intelligence system for private document ingestion and grounded, citation-backed question answering.
- Implemented document parsing, normalization, chunking, embedding generation, retrieval, reranking, and answer-generation workflows.
- Designed retrieval and response flows around source grounding so generated answers remain tied to retrieved document evidence.
- Added persistence, backend APIs, structured logging, automated tests, Docker support, and CI quality checks.
- Structured the application around maintainable provider boundaries and production-minded development practices rather than a tightly coupled prototype.

SentinelStream | Log Intelligence and Incident Detection System

Technologies: Python | FastAPI | PostgreSQL | Streamlit | Docker | **GitHub** | **Demo**

- Built a structured log intelligence system with HTTP ingestion, asynchronous processing, persistence, anomaly detection, and incident analysis.
- Implemented a bounded queue and worker-based processing flow with persistence only after successful publication.
- Developed deterministic anomaly rules for error levels, server errors, exceptions, and high-latency events.
- Implemented anomaly persistence, adjacent-window incident grouping, deterministic incident identifiers, and database-backed incident queries.
- Added keyset pagination, retry handling, observability, resilience controls, Docker, CI, and a Streamlit interface for reviewing logs, anomalies, and incidents.

SELECTED ENGINEERING PROJECTS (CONTINUED)

Community Intelligence Agent | Slack AI Automation Workflow

Technologies: JavaScript | Node.js | Slack API | PostgreSQL | Gemini | **GitHub** | **Demo**

- Built an event-driven Slack workflow that responds to community-member events and researches publicly available information.
- Designed a structured scoring workflow that returns evidence, confidence levels, recommendations, and member-fit analysis.
- Implemented model-output validation to prevent malformed AI responses from propagating through the system.
- Added PostgreSQL persistence using structured JSON data and formatted delivery of analysis directly into Slack.
- Added unit tests, endpoint validation, environment configuration, deployment safeguards, and a documented health endpoint; deployed the completed application on Render.

PROFESSIONAL EXPERIENCE

Paal AI | Client Success Manager, promoted to Sales Manager

May 2024 to September 2025 | Full-time

- Contributed approximately $270,000 in revenue through sales, strategic outreach, client relationships, and partnership activity.
- Generated 500 qualified leads across sales and growth campaigns.
- Managed a sales outreach team focused on lead generation, relationship development, and conversion.
- Worked across client onboarding, customer success, sales operations, partnerships, and relationship management.
- Collaborated with teams and external partners within the AI and Web3 ecosystem.
- Developed practical experience communicating technical products to users, prospects, and business stakeholders.

Gambit Markets | Marketing

November 2025 to April 2026

- Created content for an AI-powered prediction markets platform.
- Supported community engagement and product awareness.
- Worked in an environment combining AI products, markets, and community-driven user acquisition.

EDUCATION AND TRAINING

Caleb University, Lagos | Bachelor of Science in Computer Science

2022 to 2026 | Awaiting final results

- Relevant academic and technical development includes computer science fundamentals, software development, networking, statistics, optimisation, databases, and artificial intelligence-related coursework.

APTECH | Artificial Intelligence and Machine Learning

2025 to 2026 | In progress, certification pending

- Training covers machine learning, deep learning, natural language processing, computer vision, Python, statistics, databases, and practical AI/ML development.

ADDITIONAL TECHNICAL STRENGTHS

- Comfortable moving between classical machine learning problems and modern LLM-based systems.
- Understands the theory behind model training, evaluation, optimisation, statistical inference, neural networks, NLP, and computer vision.
- Uses official technical documentation effectively when working with frameworks such as PyTorch, TensorFlow, OpenCV, and XGBoost.
- Experienced with backend APIs, databases, asynchronous processing, testing, Docker, CI, structured logging, and observability.
- Able to explain technical work clearly to both engineering and nontechnical audiences.
