Fawaz Sobowale

AI/ML Engineer | Applied AI and Python Backend

fawazsobowale.dev@gmail.com | GitHub | Portfolio | Open to remote roles

Professional Profile

AI/ML engineer building document intelligence, machine learning inference APIs, and AI workflow automation. Connects models to usable applications through retrieval, validation, persistence, testing, and deployment. Experience in client success, sales, and marketing adds an understanding of customer needs and communicating product value.

Technical Skills

Applied AI: RAG, hybrid retrieval, reranking, citation validation, structured LLM outputs

Machine learning: Python, pandas, NumPy, scikit-learn, feature preparation, model evaluation, inference APIs

Backend and delivery: FastAPI, Node.js, PostgreSQL, Redis, Docker, GitHub Actions, pytest, Ruff, mypy

Foundations: Statistics, deep learning, natural language processing, computer vision

Additional training: PyTorch, TensorFlow, OpenCV, transformers, classical ML methods

Selected Engineering Projects

LoreForge | Document intelligence and retrieval

Python, FastAPI, PostgreSQL, React, RAG | Source | Live app | Walkthrough

- Built a deployed document intelligence application for querying private PDFs and tracing answers to source citations.
- Combined semantic retrieval and BM25 using Reciprocal Rank Fusion, with reranking, citation validation, and owner-scoped queries.
- Connected ingestion, retrieval, and answer generation to persistent storage and a React interface; added automated tests, Docker, and CI.

SentinelStream | Log intelligence and incident detection

Python, FastAPI, PostgreSQL, Streamlit | Source | Walkthrough

- Built an asynchronous log-processing system with deterministic anomaly detection and a Streamlit interface for reviewing logs and incidents.
- Implemented transactional persistence, stable incident identities, keyset-paginated APIs, retry handling, and structured observability.
- Documented setup and architecture, with automated tests, Docker, and GitHub Actions for repeatable development and review.

Selected Engineering Projects Continued

Fraud Detection API | Machine learning inference API

Python, scikit-learn, FastAPI, Docker | Source

- Served a trained logistic regression pipeline through FastAPI, turning transaction features into a probability and classification.
- Implemented startup model loading, validated inputs and probabilities, a configurable decision threshold, automated tests, and Docker packaging.

Community Intelligence Agent | AI workflow automation in Slack

Node.js, Slack API, Gemini, PostgreSQL | Source | Walkthrough

- Built an event-driven Slack workflow that researches public information and produces structured reports for member onboarding.
- Validated model outputs and kept evidence, inference, and confidence distinct for human review; persisted reports in PostgreSQL.
- Delivered formatted reports to a private Slack channel; added unit tests, configuration validation, deployment safeguards, and a health endpoint.

Professional Experience

Paal AI | Client Success Manager, promoted to Sales Manager

May 2024 - September 2025 | Full-time

- Contributed approximately $270,000 in revenue through sales, client relationships, partnerships, and strategic outreach.
- Generated 500 qualified leads and managed a sales outreach team focused on lead generation and conversion.
- Worked across onboarding, customer success, sales operations, and partnerships, communicating AI product value to customers and stakeholders.

Gambit Markets | Marketing

November 2025 - April 2026

- Created content and supported community engagement for an AI-powered prediction markets platform.

Education and Training

Caleb University | B.Sc. Computer Science

2022 - 2026 | Final results pending

APTECH | Smart Professional AI

Artificial Intelligence and Machine Learning | 2025 - 2026 | Certificate collection pending
